EXP.NO: 1

COMPARATIVE STUDY OF LOW-CODE DEVELOPMENT

Aim

To analyze the differences between **Low-Code Development** and **Traditional Software Development** in terms of development methodology, implementation time, maintenance, scalability, and suitability for developing a **Recruitment & Job Application Management System**.

Comparison Table

Criteria	Low-Code Development	Traditional Development
Development Method	Visual application builder	Programming through source code
Coding Effort	Very little coding	Full-scale coding required
Time to Build	Faster implementation	Longer development cycle
Technical Skills	Suitable for beginners and developers	Requires experienced programmers
Cost	Lower development cost	Higher development cost
User Interface Design	Pre-built forms and components	Designed from scratch
Database Handling	Built-in database integration	Manual database design and coding
Workflow Automation	Easy workflow configuration	Custom workflow programming
Maintenance	Easier updates and changes	Requires developer intervention
Scalability	Best for small to medium applications	Suitable for enterprise-level systems
Example Tools	Zoho Creator, Microsoft Power Apps, AppSheet	Java, Python, ASP.NET, PHP

Development Workflow

Low-Code Development

Identify Requirements
↓
Create Job Application Form
↓
Design Candidate Application Screens
↓
Configure Business Rules
↓
Test the Application
↓
Publish & Deploy

Traditional Development

Requirement Analysis
↓
System Architecture Design
↓
Frontend & Backend Coding
↓
Database Development
↓
Integration Testing

↓
Bug Fixing
↓
Deployment

Advantages of Low-Code Development

• Faster development

• Less coding required

• Easy maintenance

• Built-in database support

• Easy form creation using drag-and-drop fields

• Simple workflow automation

Advantages of Traditional Development

• Highly customizable

• Better for large applications

• Full coding control

• More scalable

• Greater flexibility for complex systems

Conclusion

Low-Code Development is suitable for building the **Recruitment & Job Application Management System** quickly with minimal coding.
It provides easy form creation, built-in database support, and workflow automation.
Zoho Creator helps reduce development time and maintenance effort.
Traditional Development provides greater customization and control for complex applications.
Therefore, **Zoho Creator is the preferred platform for this project due to its simplicity, speed, and built-in features.**
