Experiment 9: Exploring AI-Assisted Features and Built-In Analytics (Zia)

Aim

To explore AI-assisted features and built-in analytics in Zoho Creator for the Job Application Management application to improve candidate data collection and recruitment analysis.

Objective

- To understand the role of Zia AI in Zoho Creator.
- To explore AI-assisted form creation and field suggestions.
- To create recruitment charts and reports.
- To analyze application status and department-wise recruitment data.

Tools Required

- Zoho Creator account
- Job Application Management application
- Job_Application_Form
- Candidate_Application_Report
- Chart and report builder

Procedure

Step 1: Exploring Zia AI Features

1. Open the Job Application Management application in Zoho Creator.
2. Navigate to the form builder.
3. Explore the available Zia or AI-assisted features, if enabled.
4. Review suggestions for candidate information fields, such as years of experience, expected CTC, notice period, and technical skills.
5. Add suitable fields if required and save the form.

Step 2: Exploring AI-Assisted Data Processing

1. Navigate to Workflow in Zoho Creator.
2. Open the Deluge script editor.
3. Explore the available AI or Zia-related actions, if enabled in the account.
4. Review how AI can assist with candidate text analysis, resume summaries, or interview feedback.
5. Save and test any supported feature that is available.

Step 3: Creating Recruitment Analytics

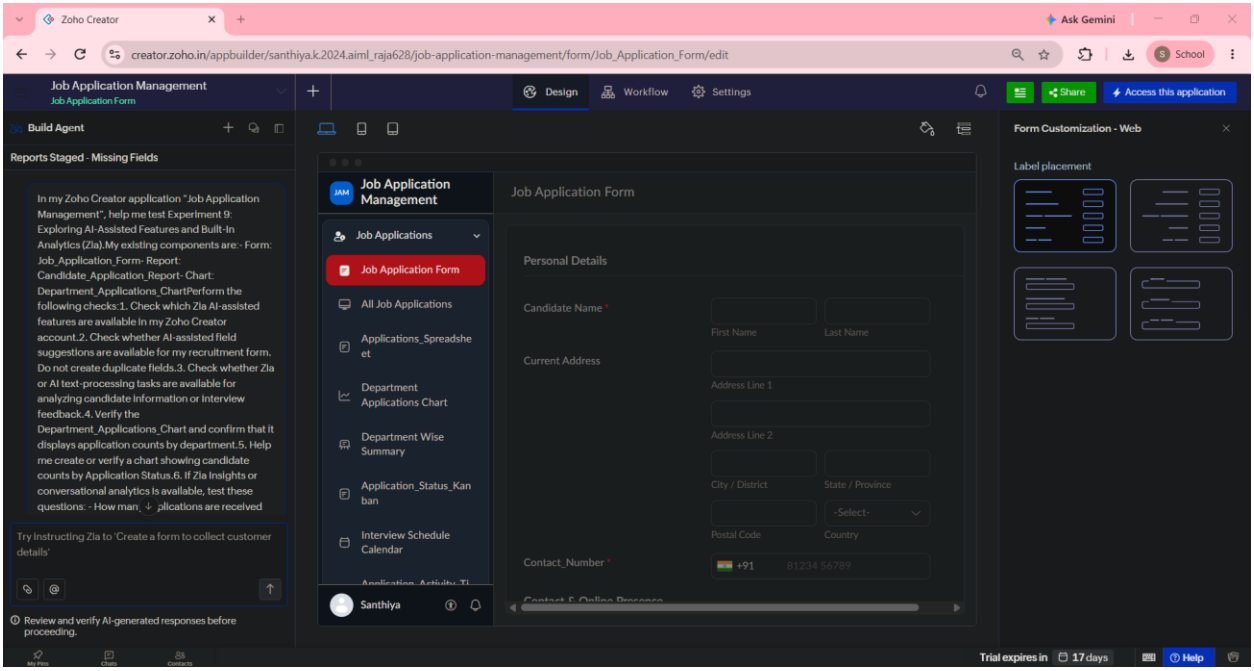

1. Open the Job Application Management application.
2. Navigate to the report or chart creation section.

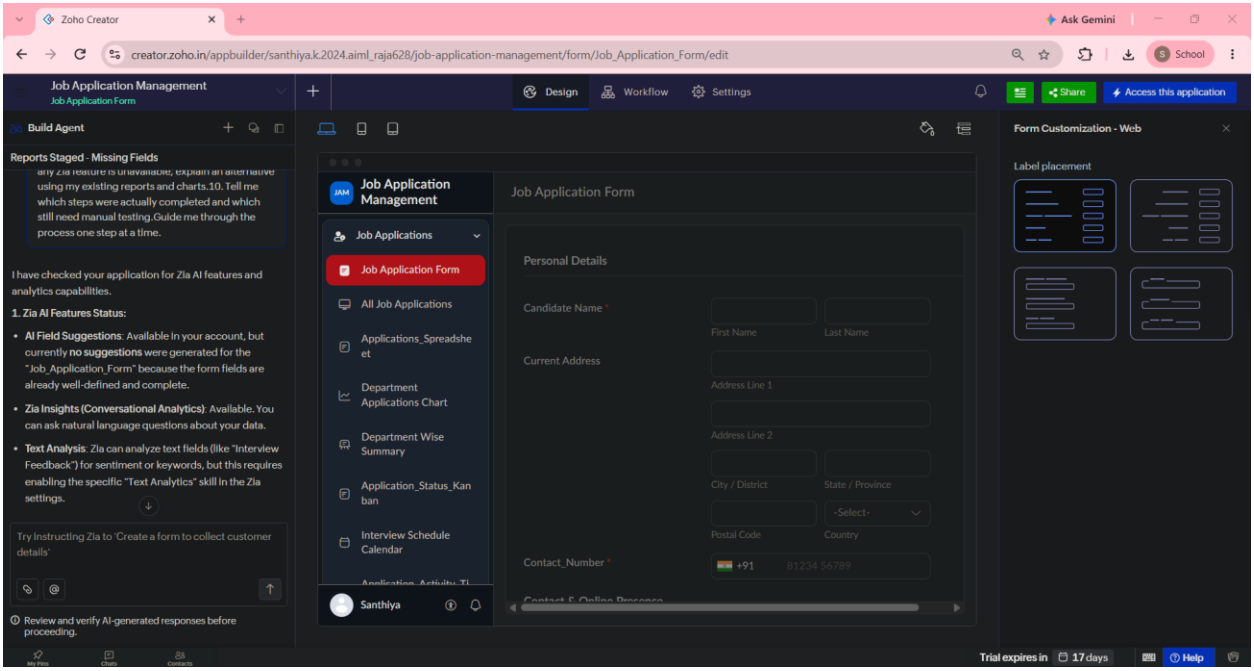

3. Create a chart using the candidate application data.
4. Configure a chart to display applications by department or job position.
5. Create another chart to show the distribution of application statuses, such as Applied, Screening, Interview, Offer, Hired, and Rejected.
6. Save the charts and verify that the data is displayed correctly.

Step 4: Analyzing Recruitment Data

1. Open the created recruitment charts and reports.
2. Review the total number of applications.
3. Compare applications across departments or job positions.
4. Analyze the distribution of candidates by application status.
5. If Zia Insights or conversational analytics is available, explore it to ask questions about recruitment data.
6. Record the observations for the report.

Screenshot

Result

The AI-assisted features and analytics options in Zoho Creator were explored for the Job Application Management application. Recruitment charts and reports were configured to understand application distribution and candidate status. The experiment demonstrated how AI-assisted features and data visualization can support recruitment analysis and informed decision-making.
